Quiz, 10 questions

1/1 points 1. If searching among a large number of hyperparameters, you should try values in a grid rather than random values, so that you can carry out the search more systematically and not rely on chance. True or False? True False Correct 2. Every hyperparameter, if set poorly, can have a huge negative impact on training, and so all hyperparameters are about equally important to tune well. True or False? True False Correct Yes. We've seen in lecture that some hyperparameters, such as the learning rate, are more critical than others.	ongratulations! You passed!	Next Item

4.

If you think β (hyperparameter for momentum) is between on 0.9 and 0.99, which of the following is the recommended way to sample a value for beta?

```
r = np.random.rand()
beta = r*0.09 + 0.9
```

This should not be selected

```
r = np.random.rand()
beta = 1-10**(-r-1)
```

```
r = np.random.rand()
beta = 1-10**(-r+1)
```

```
r = np.random.rand()
beta = r*0.9 + 0.09
```

ns 8.		
Which	of the following statements about γ and β in Batch Norm are true?	
	The optimal values are $\gamma=\sqrt{\sigma^2+arepsilon}$, and $eta=\mu$.	
Un-s	selected is correct	
	They can be learned using Adam, Gradient descent with momentum, or RMSpr not just with gradient descent.	op,
Corr	rect	
	β and γ are hyperparameters of the algorithm, which we tune via random sampling.	
This	should not be selected	
	There is one global value of $\gamma\in\Re$ and one global value of $\beta\in\Re$ for each layer and applies to all the hidden units in that layer.	er,
This	should not be selected	
	They set the mean and variance of the linear variable $z^{{ extstyle l}}l$ of a given layer.

	raining a neural network with Batch Norm, at test time, to evaluate the neural rk on a new example you should:	
	Skip the step where you normalize using μ and σ^2 since a single test example cannot be normalized.	
\bigcirc	Perform the needed normalizations, use μ and σ^2 estimated using an	

exponentially weighted average across mini-batches seen during training.

Correct

Hyperparame Frameworks Quiz, 10 questions		ter tuning, Batch Normalization, Programming Use the most recent mini-batch's value of μ and σ^2 to perform the needed normalizations.	8/10 points (80.00%)
		If you implemented Batch Norm on mini-batches of (say) 256 examples, then to evaluate on one test example, duplicate that example 256 times so that you're working with a mini-batch the same size as during training.)
	~	1/1 points	
		of these statements about deep learning programming frameworks are true? (C t apply)	heck
		A programming framework allows you to code up deep learning algorithms wit typically fewer lines of code than a lower-level language such as Python.	h
	Corr	ect	
		Deep learning programming frameworks require cloud-based machines to run	
	Un-s	selected is correct	
		Even if a project is currently open source, good governance of the project helps ensure that the it remains open even in the long term, rather than become closer or modified to benefit only one company.
